LEVEL 2 ASP SEMINAR QUESTION & ANSWERS

1. Question: Can the eNOSW app be updated so when an ASP logs on they are advised if they have any defects?

Answer: The design of the next version of the eNOSW app has already progressed significantly and this function was not included.

The level of defects by ASPs is extremely low when compared to the work being undertaken and these will also reduce when ASPs no longer undertake basic metering work so it is unlikely that there would be a future case to incorporate this feature.
